R1.7: Integration of knowledge and ideas

Integrate and evaluate multiple sources of information presented in different media or formats as well as in words in order to address questions or solve problems.

W6:6: Production and Distribution of writing

Use technology including the Internet to produce, publish, and update individual or shared writing products taking advantage of technology’s capacity to link to other information and display information flexibly and dynamically

Technology

Technology 5: Benchmark D

Select access and use appropriate electronic resources for a defined information need

A Note to the Teacher

These lessons activities will help students to gain knowledge and skills to start a Service Learning Project in your school. It is assumed that the class will document their research, guest speaker notes, field trip notes, and in-school activities and be able to create a presentation Portfolio to OCLRE during the spring program. Further, it is also assumed this Service Learning project will be an on-going project in the school as a result of these civility lessons. The “Civility Team” leaders in the school will teach their peers how to be civil to each other through peer mediation as a result of these seven lessons. Support resources are included where appropriate and further references are also given.
Lesson One: What is Civility? How do you demonstrate civility?

Introduction:

- Brainstorm “words that mean civility”
- Described how behaving “civil” looks like (students write and act out skits)
- Students determine acceptable behavior of civility for the class
- Students develop rules for the class
- Create bulletin board with “words of civility”

Procedure:

Teacher may introduce lesson by projecting or writing on the chalk board a few phrases like; sharing, happy smile, respect, yielding for an elderly person or younger person etc. and ask students what these words mean to them. Responses may vary from nice person, positive attitude, to polite.

Point out to the students that these words represent “kindness” or “civility” and ask them to identify more words. Write all students’ responses on the board. Introduce the word “civil or civility” and explain how civility is in everybody’s interest in order to live with and work with one another.

The teacher will define “civility” as “an act of politeness”; “demonstrating good manners or courtesy”; Keep it simple and display the definition where students can see it all the time. Ask students to describe civility in their daily lives and write out skits demonstrating “civility” and act them out before their classmates. This may take two days to complete depending on how well students grasp the idea.

In groups, teacher will encourage students to describe what civility in their classroom should look like, and define the criteria for civility in the classroom. Students will also create a list of appropriate consequences if one doesn’t meet expectations. Each group reports out acceptable words or acts of civility for the class. Students, with help of the teacher will create a bulletin board of “words of civility” for the class. This activity should be directed by the teacher to produce class rules and consequences.

Encourage students to agree on the bulletin board display of their class code of conduct.

Extension:

Assign students to record two uncivil acts they see around school or at home. Students should provide suggestions of how to correct the behavior and report back to class the next day.
Lesson 2: Acts of Civility around School

Open the discussion with students’ extension assignment. Let students report what they recognized as “unkind acts”. Responses may vary from rude, impolite, disrespectful, evil etc. Allow all to report out and, in the end, tell the students that the class will be leaders in civility and will model civility and respect around school to make the school community a kinder place. Introduce the idea of civility badges or ribbons that students will give out to peers caught in the “act of civility”. (The teacher may create school mascot bucks as tokens also) You may create these on the computer on colored paper, cut them out and distribute to students. You may target community area of the school like the cafeteria, gym, or hall ways.

Make the rest of the students know via PA announcements what your class leaders are doing to improve the school community and involve other teachers. Monitor activity by how many tokens are given out weekly. Arrange with Principal to recognize the students with “civility certificates” (samples in teacher resources).

Introduce the six pillars of character and describe how they contribute to civility. Use one of the graphic organizers (in teacher resources) for students to write in each pillar and what it means. The graphic organizer will have: trustworthiness, respect, responsibility, fairness, caring, and citizenship. You will reference www.charactercounts.org or www.goodcharacter.com for the content. Explain to the students that these pillars of character are also called values that a good citizen must have. (1) That people show their values through their actions. (2) That peoples’ actions are driven by ethical decisions when one chooses what is right and wrong to do.

Use one of your local leaders as a model for good character. Analyze his/her civility contributions to the community. You can also choose national leaders e.g. Dr. Martin Luther King, President Kennedy, Senator Ted Kennedy, Mrs. Laura Bush, Judge Thurgood Marshall, Mrs. Michelle Obama etc. Ask students to analyze how these leaders displayed civility to the country. Ask if students have their own leader to analyze.

Help students to reflect on their own character. What personal values do they have that contribute to their behavior? Allow students to select one or two values and write how they contribute to their character (behavior). You can display their writing on the bulletin board. Discuss ways to improve character.

Introduce “universal values” as values held by all people regardless of race, gender, or geographical location. Values such as “peace; freedom; social progress; human dignity; civil rights, happiness; and moral ethics”. (You may find these values written in a variety formats). Have students write them down for the lesson extension. Point out to the students that universal values are slightly different from pillars of character but they support each other.
Spread civility in the school by encouraging students to make posters with civil messages. Post them in the main entrance where all can see. The class will become the “Civility Agents.”

• Explain how character impacts individuals and society
• Analyze the character of famous citizens (President Kennedy, Dr. Martin Luther King, President Lincoln, Judge Thurgood Marshall for example) and how their character has impacted society
• Students create graphic organizer of universal values
• Students reflect on personal values and how they acquired

Extension:

Student will interview an adult in the community or family member and ask what each universal value means to them. Students will answer the question: How do values contribute to civility? Students will report out their interviews to the class.
Lesson Three

Citizens’ Rights and Responsibilities

• Discuss, analyze, model citizens’ right to “Free Speech”
• Explain how freedom of speech hurts others in the absence or respect (role playing; skits)
• Discuss how to treat others with civility even when you don’t agree or like them
• Use Internet to Review “letters to the Editor” from a variety of newspapers
• Re-write selected “letters to the Editor” using civility words
• Class writes to local newspaper Editor explaining why and how civility impacts others

Procedure:

Introduce the First Amendment to the U.S. Constitution. Social studies teacher can provide more details of why the 13 states had to agree. Non social studies teacher point out to the students that the Bill of Rights was necessary so that all individuals in the 13 states were treated the same. Remind the students that there are 27 Amendments to the Constitution, but that you will focus on the First, which directly relates to civility. Reference www.historyforkids.org.

If you have access to computers have students go to the site to read about the Bill of Rights. Ask students to write their understanding of “The right to free speech” for discussion. You can also type out a hard copy and give each student for future reference. Ask the big question: “when does the freedom of speech hurt others”? Tell students that as “Agents of Civility” the class will work together to find solutions to uncivil behavior in the school community. Point out how freedom of speech sometimes leads to disrespect for human dignity. Find examples from the local newspaper Editorial or Commentary sections and select writings that represent uncivil behavior. Analyze a commentary together as a class and lead the class to re-write the commentary substituting the words or phrases that are hurtful. Review antonyms and synonyms for this activity. The class will need a thesaurus reference book or use of the Internet to rewrite their pieces.

Invite a television reporter, or newspaper Editor to the class to help students understand how reporters use ethical judgment to preserve human dignity even when they disagree with the news they have to report. Prepare students to ask civility related questions. (Example when they have to report on a murder or rape cases).
Extension:

Many television and radio programs, newspapers, web sites, and advertisers have their own agenda, or underlying messages, to promote. Students will identify one advertisement from one media source and analyze what they see in the media that may come into conflict with freedom of speech and civility. Students will re-write the advertisement.

If you have access to recordings equipment this activity can be recorded as part of the class portfolio for OCLRE. Enhanced podcasting with enhanced PowerPoint (voice over) is a quick cheap way of recoding student work.

Another extension can be students writing to the local newspaper Editor/Commentary describing the Civility Project the class is implementing and why they believe everyone should practice civility in their daily lives to make a friendlier community.
Lesson Four and Lesson Five (the activities of lessons 4 & 5 are interrelated)

In lesson four, the class should have an official team name (Civility Agents; Civility Police, Civil Team) if not already selected teacher should help students choose a name of their preference. Monitoring civility acts and giving out tokens should be on-going. By this time The Team will need more time beyond the school day to work on the implementation of the project.

Communication and Conflict Resolution

• Discuss how civility in communication promotes respect for others.
• Identify Verbal and nonverbal communication strategies.
• Demonstrate how to be assertive and respectful at the same time.
• Identify the “I” and “You” messages in communication and recognize how each affects the conversation.
• Re-write “You” statement into “I” statements.
• Use the Internet to view and analyze political speeches.
• Analyze words in a political speech and describe how words of (in)civility were delivered the message.
• Review campaign speeches or advertisements to analyze how civility is used in communication.
• Work in groups emulating political parties to write speeches on a current issue. Speeches must demonstrate civility even when they don’t agree.
• Class visits City Council in session to observe how city officials debate each other with civility.
• Class monitors peer communication skills when in conflict. Class Team created in lesson three will monitor hallways, lunch, recess etc. This Team will work with the school security/principal and school staff to mediate minor students’ conflict; the class teacher will guide and advise.

Procedure

After viewing the media reports with students, discuss how good communication skills are important in conveying messages. Students will understand that civility in communication is important even when you don’t agree or like the person. Discuss verbal and nonverbal communication, and positive and negative communication. Allow time for the class to explore why people argue. Write students’ responses on the board. Discuss the difference between arguing and disagreeing ask students to demonstrate each. They can write skits for this activity.

Select an issue from the local community or school (dress code or school start time) with varying levels of disagreement and divide up the class in two teams to discuss the issue. Let
one side be in favor of the issue, and the other against it. Students will research details of the issue and debate each other. Remind students that one can be assertive and still remain respectful of the other person he disagrees with.

Discuss the “I” and “You” statements and how they contribute to negative and disrespectful communication. Give the students the definitions as: “I” messages allow you to say how you feel and what you think. “You” massages often lead to attacks and accusations. Example of “I”: I feel angry when you interrupt me when I’m speaking because it makes me feel like you don’t value my input”; as opposed to “You always want to be in charge of the conversation and don’t let anyone else talk”.

Teacher will create a list of “You” message statements and ask students to re-write them using the “I” message statement. This activity can be done together with the whole class. Tell the class that as leaders they will need to use the “I” messages more often when mediating disputes between people.

Remind students of citizens’ rights and responsibilities. The first responsibility is to respect others’ rights: Treat other people as you expect to be treated. Tell students that as Civility Agents, they are leaders in the school and must be concerned about their behavior not only for themselves, but also because of the example they are setting for others in the school. The class will listen to the 60-second podcast “Civic Lessons” on responsibility and freedom of speech (in teacher’s resource).

Arrange for the Civility Team to give a presentation on “how to be civil with each other” to lower grade level classes, faculty meetings, PTA, the Board of Education, and social centers (whichever is within schedule) to give students practice in Public speaking. They can prepare a PowerPoint or skits demonstrating their understanding. Their goal is to convince others to act in a civil manner toward each other, even when they are not friends. The Team will need time to prepare and practice for the presentations. Record these events with video and pictures for OCLE showcase.

Invite a staff from the Prosecutor’s office or an attorney from the local Bar Association to talk to the students about the challenges of “free speech” and respect for human dignity and how it plays out in the courts. Students should be prepared to ask questions about “when freedom of speech hurts others.

Students should be aware that fairness and other ethical decisions are also governed by our constitution and that being ‘not guilty’ does not always mean being right. If the local community has a famous court case in the immediate past, help student research how the court protected the rights of the defendant and the plaintiff. How did the lawyers on both sides
practice civility on the court room? Ask students if they would have ruled differently if they were the judge. What was fair and what wasn’t?

Extension:

Teacher will research speeches of famous leaders. These can be found on www.youtube.com. In an election year you can find many from public radio or television and CSPAN. Give students the opportunity to analyze the speech and comment on how civil or uncivil the leader behaved in the speech. In addition, ask students to look for how the leader used the “I” or “you” statements to deliver the intended message. During a campaign year, search the Internet for opposing leaders either from local or national offices and have students analyze the civility of campaign speeches. Don’t forget the local newspaper Editorial.

Divide the class into political parties and ask them to present views on an issue. The idea is to demonstrate civility and respect even when they disagree. Video tape the debate and have students critique each other’s’ communication skills.

Arrange a field trip to the City Council Chambers while in session. Students will observe how leaders debate each other on matters that affect the community. Students should pay attention to the “I” and “you” statements of the council members. After the visit ask students to re-write what they heard using more civil language.

Conflict Resolution

Introduce conflict resolution and explain the consequences when two sides disagree without coming to a compromise. Explain how pillars of character play a big role in conflict resolution. Point out that conflict between nations can lead to war, and conflict between individuals can lead to divorce, loss of employment, and loss of friendships, fights or even death. Help students understand that conflict can be resolved with good communication skills, respect for the rights of others, and civility. Let students know that their role as “Civility Leaders” requires them to monitor conflict among peers to avoid fights in the school.

Ask students to remember and apply the pillars of character when dealing with peer conflict that may result in one being hurt. Tell them that a leader is “terrific” and always demonstrates Trustworthy, Responsibility, Respect, Fairness, Caring, and Citizenship (TRRFCC). The acronym should be displayed in the classroom and visible to all, all the time. This will help students remember in a fun way.

The teacher will coach students in listening strategies that mediate conflicts. Role playing is a good technique to use. As a class, practice these listening skills below.
**Empathy**: the ability to identify with and understand somebody else’s feelings or problem. How to use phrases that show you understand like “That sounds unfair” or “You must have been so hurt.”

**Feedback**: giving feedback is very important. When a listener lets a speaker know that he/she is trying to understand what is being said. For example tracking the speaker or nodding.

**Interject**: not interrupting but taking a moment to pause and insert something in the conversation to encourage the speaker to continue.

**Express**: to show interest by asking question that leads to more conversation like “You mean she just kicked your book bag and all your belongings fell out.”

**Restate**: In your own words, restate what the speaker just said to you. Then ask the person whether you understood the message correctly.

This class role playing will need a couple of days for students to be able to practice the techniques while monitoring their peers. Tell students that lawyers are good listeners and that is how they prepare to advocate for clients in court. The judge acts as a conflict mediator and must listen very carefully to both attorneys for their arguments and then rely on the law to help them make fair judgments.

**Extension:**

The teacher will coach the Civility Team to mediate minor peer conflicts. Collaborate with 1-2 classrooms that can send you minor student conflict for the Team to mediate applying the strategies learned. Most of the time these will be resolved by having someone just listen. After several monitored encounters, the Team should be able to spot peer conflicts and bring them to mediation while the teacher is on the sidelines. It is a good idea to dedicate special periods for mediation and the Team should wear a special shirt or badge on the day of. This service learning activity should continue throughout the year,

Every week thereafter, let the students record their experiences, and reflect on the mood of the school. If possible, videotape the Team’s reflection session because it gives students a chance to evaluate their speaking and listening skills and to improve.
Lesson Six: A Visit to the Court House (Judge’s Chambers)

• Visit the court house and, if possible, sit-in during a case hearing
• Observe how the criminal attorney and prosecutor presents their case
• Analyze how the “right to free speech” is protected in court
• Observe how the Judge speaks with civility to all parties in a case
• Continue implementing peer mediation with the “Civility Team”

Procedure

Teacher will make arrangement for a field trip to the court house to sit in on a case hearing. This experience is intended to demonstrate to the students how prosecutors and attorneys conduct themselves in a civil manner to protect a person’s “Freedom of Speech” even in a criminal case. Students will listen for statements of civility and “you” statements from the prosecutor and defense attorney to bring back to school. At school they can rewrite the statements for the prosecuting attorney and defense attorney into “I” statements.

May request a meeting with the local Judge to learn how he/she protects the “Right to Freedom of Speech” without violating rights of others in the courtroom. When given enough advance notice, judges often like to talk to young people. If possible arrange for a meeting with the judge, and be sure to alert them in advance to the students’ work mediating the disputes of their peers. If the class is successful in getting to meet a Judge, please remember for the students to write thank you notes, and tell how they plan to use the information they learned from the judge in their daily lives. Students should be prepared to talk about their Civility Service Learning Project at school and also ask the Judge questions about ethical decisions and fairness. and how they can improve their practice.

The Team should by now have developed a plan of which member mediates what day and where. The teacher will keep the group motivated by introducing them to the staff, maybe during staff meeting and recognizing the great job they are doing. Dedicate meeting times so that you work on the plan as well as prepare for the OCLRE showcase. Tell students that they are implementing a “service learning” program to promote civility at the school and that the TEAM will organize their work in a presentable way so that other students from other Ohio schools can learn from it.

Lead the students into thinking about service learning; reflecting on what they have learned so far from lesson one. This exercise will help students to understand why service learning is needed to teach everybody what they have learned themselves. See the graphic organizer in the teacher resources. Using a story board is another way of organizing students’ thoughts.
Lesson Seven

• **Pulling it all together: Now What? Service Learning**
  - Organize what the students have learned into a presentation using available technologies
  - Create a portfolio of the Team’s work right from the beginning with all points of interest from project
  - Create a PowerPoint or Prezi, or video demonstrating the importance of civility in promoting a healthy community
  - Give students a chance to narrate their work, do a voice-over for the PowerPoint
  - Present the project at the Board Meeting, PTA, faculty meeting, Girls and Boys Club, local bar association, etc.

• REMEMBER TO CELEBRATE THE STUDENTS’ ACHIEVEMENT AND ACCOMPLISHMENTS IN THIS PROJECT, NO MATTER HOW SMALL. RECOGNIZE THEIR EFFORTS.

**LOTS OF LUCK!**

Common Sense

Stop! Don't play with matches!
Are you feeling better?

Yes, thanks!
Let's keep our city clean!
Thanks a lot for helping me!

It’s nice to be appreciated!
A girl in Franklin’s class makes fun of him almost every day in front of the other students. She laughs at his clothes and the way that he looks. Franklin gets along well with most of the children at school and tries hard to ignore Kathleen’s teasing, but many times he also gets angry with her. Yesterday, he saw Kathleen’s father picking her up from school, and heard her father yelling at her and calling her names. Franklin started to feel sorry for Kathleen. The next day at school, Kathleen makes fun of Franklin and calls him names. What should Franklin do? Should he stand up for himself or try to be kinder to Kathleen? Should he say something to Kathleen about what he saw the day before, when her father picked her up from school, or should he keep this to himself? What might the other students think if Franklin does not defend himself by getting angry with Kathleen? Have you been in a situation where someone is being unkind to you for no real reason? What would you do in Franklin’s situation?
Fernando has just started attending a new, larger school in a new neighborhood. The children at the new school are not as friendly as those at his previous school and he had to eat lunch by himself for the first week. During his second week, however, another child who seemed nice sat with him. Later, at P.E. class, Fernando noticed a lot of the other children making fun of his new friend for being overweight, and calling him unkind names. Fernando wants to fit in and make friends, but he also doesn’t want to hurt his new friend. What should Fernando do? What would you do? Have you ever been in a situation where somebody was laughing at a person you care about?

You are watching some kids in your grade play basketball at the gym. A skinny boy with glasses tries to shoot a basket but ends up falling on his face. His glasses break. Some bigger kids begin to laugh at him. The boy can’t see very well without his glasses. You want to help him up, but if you do, the other kids may laugh at you, too. How would you feel? What should you do?
The United States is a country of diversity. People from many different ethnic and religious groups live in the United States. Sometimes, people from one group don’t like another group. What suggestions do you have for peaceful coexistence?
Sometimes it seems as though all we hear about in the news is war, violence, and cruelty. But we know that peace and kindness are everywhere around us. Take some time in the next week and write down every peaceful act and every act of kindness you see in the form below.

respect  responsibility  discipline  sportsmanship  tolerance  truthfulness
trustworthiness
Background. Historically, formal standards directing and guiding the educational mission have focused on defining grade-appropriate academic objectives. In the past decade, however, influential reform movements have broadened the goals of education to emphasize critical and creative thinking, decision-making and problem-solving abilities, social and emotional life skills, ethical character traits, and practical knowledge and competencies reflecting the demands of the modern workplace.¹

Domains of Student Development. Thus, whether included in formal standards or not, educational institutions are expected to provide students with knowledge, skills, values, and character traits in three distinct domains of development:

1) Academic – instilling educational values, beliefs, and attitudes; developing learning-related character traits and cognitive skills.

2) Social/Emotional – instilling self-awareness and self-management skills, interpersonal skills, and positive life skills and character traits.

3) Character – instilling or strengthening core ethical values and moral character traits.

Objectives. These Model Standards present a comprehensive, integrated statement of critical educational outcomes deemed necessary to prepare students to:

1) Succeed in school (including college or other post-secondary education).

2) Succeed in the workplace.

3) Live happy, worthy, and fulfilling personal lives.

4) Become engaged, responsible, and productive citizens.

Educational Outcomes. To accomplish this, the Standards identify four types of educational outcomes:

1) Knowledge – what students should know and understand.

2) Skills – what students should be able to do.

3) Values – what students should value and believe.

4) Traits – what characteristics and attributes of character students should possess.

These Standards are a project of the nonprofit, nonpartisan Josephson Institute. They are designed to provide states, school districts, and individual schools with a comprehensive, fully integrated guide that will help them achieve ambitious but realistic educational objectives in the academic, social/emotional, and character domains. The Institute is committed to continually updating and revising these Model Standards in response to the experience, suggestions, and advice of thoughtful educators.

¹ These Standards draw heavily upon the hands-on experience of thousands of educators involved in the Josephson Institute’s CHARACTER COUNTS! school and student improvement programs. They also incorporate the most current research and theories including: positive school climate, connectedness, PBIS behavior modification, the growth mindset, executive function, change theory, emotional intelligence, multiple intelligences, and research-based instructional strategies. These Standards also incorporate provisions and recommendations included in the Common Core State Standards Initiative; the Partnership for 21st Century Skills’ Framework of Student Outcomes and Support Systems; the Illinois Learning Standards for Social/Emotional Learning; the Kansas Social, Emotional, and Character Development Model Standards; the ASCD Whole Child Initiative; the Collaborative for Academic, Social, and Emotional Learning (CASEL); the Character Education Partnership; the Institute for Excellence & Ethics; the Center for the 4th and 5th Rs; and the National Center for Mental Health Promotion and Youth Violence Prevention.
A1. MOTIVATED AND COMMITTED LEARNERS

Students value education and are eager, committed learners who: 1) love learning as a source of personal enjoyment and growth; 2) believe that learning and education will enrich and improve their personal lives; and 3) are motivated to do well in school, graduate, and seek higher educational opportunities.

A1.1 Curiosity
Students demonstrate curiosity and an eagerness to learn new things about themselves, others, and the world around them. They seek answers by asking questions, reading, researching, exploring, experiencing, and experimenting.

A1.2. Personal Growth and Lifelong Learning
Students believe in the importance and value of continuous self-improvement, personal growth, and life-long learning and are committed to:

1) Increasing their knowledge, understanding, and skills through reading and advanced education.
2) Broadening their horizons through travel and other enriching experiences.

A2. CONFIDENT AND DILIGENT LEARNERS

Students demonstrate self-confidence in their ability to learn what they need to know and to develop the personal attributes they need to succeed in school and the workplace.

A2.1. Growth Mindset
Students approach learning and other aspects of their lives with a growth mindset, believing that with diligent effort they can:

1) Increase their basic intellectual abilities (i.e., intelligence), including the learning and thinking skills enabling them to master new and difficult concepts.
2) Develop life skills, personal attributes, and moral virtues (e.g., self-discipline, self-awareness, empathy, positivity, perseverance, resilience, integrity, and responsibility) that enhance success in all aspects of their lives.

A2.2. Learning From Mistakes
Students demonstrate a positive perspective about mistakes and unsuccessful efforts, viewing them not as failures, but as a necessary and unavoidable part of learning. Students always ask themselves: “What can I learn from this?”

1) Students understand the concept of “failing forward” — they learn from every failed attempt knowing they have gained new knowledge that will help them succeed in the future.
2) Students understand that persistence, patience, and self-discipline are often necessary to learning. They are willing to work hard and persevere in order to succeed.

The growth mindset is a concept developed by Dr. Carol Dweck positing that all basic abilities, including intelligence and talents, can be developed through diligent effort. Dr. Dweck’s research shows that students who believe their intelligence and abilities are fixed and permanent (e.g., “I’m just no good in math” or “I can’t learn a foreign language”) are much less likely to tackle challenging tasks and persist in learning when they find the concepts difficult. In contrast, students who adopt the growth mindset show greater motivation, study harder, and get better grades in school and higher scores on standardized tests because they are more likely to focus on improvement instead of worrying about how smart they are. They also demonstrate greater persistence in the face of difficulties because they have confidence that their efforts will pay off and that they will learn more and get smarter.
Research demonstrates that individual students learn differently (e.g., left-brain or right-brain dominance, a preference for auditory, visual, or kinesthetic learning) and respond better to certain teaching strategies (e.g., lecture, discussion, or inquiry-based activities). However, students must develop the willingness and capacity to learn in all modalities and through various methods, as their teachers may not have the time to individualize the learning process to each student’s preferences.

### A3.2. Full Engagement in the Learning Process

Students demonstrate full engagement in their learning by:

1. Being organized.
2. Coming to class prepared.
3. Attending all classes.
5. Paying attention.
6. Remembering and following directions.
7. Participating in class.
8. Taking good notes.
10. Completing all assignments promptly rather than procrastinating.
11. Establishing an effective study routine.
12. Using a planner or calendar.
13. Taking care of themselves (e.g., good diet, adequate sleep, exercise, and a healthy lifestyle).

### A3.3. Self-Directed Learners

Students demonstrate responsibility for their learning by becoming autonomous learners who start and complete their school work without the need for direct supervision or external pressure.

### A3.4. Resourceful and Discerning Researchers

Students demonstrate the ability to conduct broad-based, independent, and discerning research to answer questions that interest them and provide the source material for major papers and projects.

### A3.5. Versatile Learners

Students are versatile learners, demonstrating the ability to learn by listening, seeing, and doing. They adapt and respond to diverse teaching strategies.3

---

3 Research demonstrates that individual students learn differently (e.g., left-brain or right-brain dominance, a preference for auditory, visual, or kinesthetic learning) and respond better to certain teaching strategies (e.g., lecture, discussion, or inquiry-based activities). However, students must develop the willingness and capacity to learn in all modalities and through various methods, as their teachers may not have the time to individualize the learning process to each student’s preferences.
A3.6. Connection to School Community

Students strive to form bonds with teachers, counselors, and other adults, and to classmates in their school community. They understand that this substantially improves their chances of doing well in school and avoiding dangerous and unhealthy behavior.4

1) Students believe they belong and that their teachers, counselors, and others care about them.
2) Students participate in school activities or clubs.

A4. KNOWLEDGEABLE, LOGICAL, CRITICAL, AND CREATIVE THINKERS

Students demonstrate progressively complex cognitive abilities to become knowledgeable, logical, critical, and creative thinkers, especially in the areas of reading, writing, speaking, and listening.5

A4.1. Ability to Acquire and Remember Knowledge

Students demonstrate the ability to acquire, recall, and retain basic and complex forms of information enabling them to:

1) Remember facts, lists, procedures and methods (e.g., the correct spelling of words, the boiling point of water, benefits of a good education, and the formula for determining volume).
2) Correctly identify and label (e.g., name shapes, identify from multiple options the correct statement of Aristotle’s Golden Mean).

A4.2. Ability to Understand Knowledge

Students demonstrate the ability to understand (i.e., comprehend) the meaning and significance of facts, assertions, ideas, concepts, and theories acquired by listening, through experiential learning or by reading expository (e.g., essays, editorials, science textbooks) or literary (novels, plays poems) writings. They demonstrate understanding by:

1) Restating, paraphrasing, explaining, and summarizing facts, definitions, methods, rules, theories, and concepts.
2) Preparing and delivering explanatory and persuasive arguments and presentations.
3) Drawing distinctions and perceiving differences and similarities (i.e., comparing and contrasting).
4) Understanding the literal meaning and the implications of information conveyed in all forms of nonfiction writings (e.g., textbooks, diagrams, graphs, bus schedules, instruction manuals, schematics, and blueprints).
5) Interpreting the literal and symbolic meaning of various forms of literary writing.
6) Illustrating or simplifying information with pictures, diagrams, charts, and graphs.
7) Translating quantitative written statements verbal material to mathematical equations or visual representations (and vice versa).

A4.3. Ability to Apply Knowledge (Working Memory)

Students demonstrate the ability to apply their knowledge in new situations and in useful ways (e.g., using a currency conversion formula to determine the price of an object), including retrieving and applying separate strands of retained knowledge as needed to successfully perform tasks. (This is working memory, a critical executive function skill.)

---

4 Establishing and maintaining meaningful connections and a positive social network is crucial protective factor in helping young people avoid risky and unhealthy behaviors; it is also a major factor in developing greater resiliency. Students who feel connected to their school (by bonding with teachers, coaches, or classmates and by being involved in sports or other school activities) are less likely to: 1) use drugs or alcohol, 2) exhibit emotional distress, 3) demonstrate violent behavior, 4) attempt suicide, 5) become pregnant, 6) skip school, or 7) be involved in fighting, bullying, and vandalism. Connected students are also more likely to succeed academically and graduate.

5 These standards recognize that cognitive skills are developmental (i.e., the capacity to engage in higher order learning skills generally progresses as children mature). Thus, expected outcomes must be aligned to the developmental stage and individual capacities of each student. These Standards incorporate but re-organize Benjamin Bloom’s classic six-level taxonomy of cognitive development (knowledge, comprehension, application, analysis, synthesis, and evaluation). They also incorporate specific performance-oriented complex thinking and learning competencies embodied in the Common Core State Standards (CCSS) and the 21st Century Student Outcomes and Support Systems. The specific learning objectives of this section include both measurable product outcomes (e.g., performance of particular mental tasks measured in relation to specific levels of competency) and process outcomes (e.g., objectives focused on learning how to learn, where success is evaluated in relation to a student’s past performance and potential rather than as an objective measure of competence).
### A4.4. Ability to Analyze and Evaluate (Critical Thinking)

Students demonstrate increasingly sophisticated analytical and evaluative skills and a disposition toward critical thinking, including the ability to:

1. Organize, classify, and categorize information.
2. Identify the organizational structure, component parts and essential elements of written and oral communications and creative works.
3. Identify and take into account factors that might affect the accuracy and validity of their own personal beliefs and conclusions.
4. Challenge, question, and test the accuracy and validity of recommendations, claims, and assertions by identifying and taking into account: a) internal inconsistencies, b) logical flaws, c) unproven or unstated assumptions, d) the existence of contradictory evidence and opinions, e) the currency and pertinence of data, and f) factors that bear on the objectivity and reliability of the sources of information (e.g., credentials, prejudice, bias, attitudes, motivations, and conflicts of interest).
5. Evaluate the relevance and weight assigned to specific evidence or arguments by: a) distinguishing between facts, opinions, speculations, and feelings and b) considering the expertise, personal knowledge, character, and credibility of the source.
6. Identify and describe strengths and weaknesses, and constructively express informed evaluative judgments (i.e., criticism), concerning the merit of oral communications (e.g., speeches, debates), writings (e.g., news reports, editorials, and research studies), performances (e.g., acting, singing) and artistic works (e.g., sculptures, paintings, symphonies).

### A4.5. Ability to Create and Innovate (Synthesis)

Students demonstrate creative thinking, innovativeness, originality, and an openness to challenge assumptions, traditions, and preconceptions by re-classifying, re-categorizing, re-organizing, or rearranging information; assembling, combining, integrating, and reconciling divergent theories and approaches; and by supplementing existing theories and explanations with new perspectives or approaches. Using these high-level cognitive skills students are able to:

1. Devise original, fresh, and unique ideas (i.e., “thinking outside the box”) to solve problems, to improve current practices or develop wholly new approaches.
2. Produce original and inventive creative works (e.g., literature, art, or technology).

### A4.6. Ability to Concentrate

Students understand the importance of attentiveness and demonstrate the ability to concentrate (i.e., give focused, undivided attention) in class and while studying by avoiding distractions and focusing on the task of learning.

### A4.7. Perceptive and Observant

Students demonstrate perceptiveness, keen observation skills, and discernment while reading, listening, and watching. They pay attention to detail, noting anomalies or inconsistencies, and asking questions to resolve doubts and discover connections and patterns in seemingly unrelated events.

### A4.8. Openness

Students demonstrate openness to new and different ideas and experiences by:

1. Considering (i.e., being open to) divergent and opposing viewpoints and alternative ideas and approaches.
2. Their eagerness to go to new places and try new things.

### A4.9. Intellectual Integrity

Students demonstrate the trait of intellectual integrity by:

1. Being sincere (i.e., not using knowledge or argumentation skills to assert or defend positions they don’t sincerely believe).
2. Their willingness to challenge and re-assess their own assumptions, beliefs, and conclusions, to admit errors or logical weaknesses and to change their beliefs and positions in response to new evidence or arguments.
A5.1. Rational Decision Making

Students demonstrate the ability to employ a rational process that avoids rationalizations and elevates logic over emotions. The rational process includes:

1) Identifying long-term and short-term objectives.
2) Devising alternative courses of action to achieve the objectives.
3) Foreseeing potential consequences to each person or group (i.e., the stakeholder) affected by the decision.
4) Choosing the course of action most likely to produce the optimum (i.e., best possible) result.
5) Monitoring the effectiveness of the decision and making adjustments as necessary to achieve the objectives.

A5. EFFECTIVE PROBLEM SOLVERS AND DECISION-MAKERS

Students understand that their competence and character will be judged in terms of the choices they make. They demonstrate the ability to employ critical and creative thinking skills to solve problems and make rational, ethical, and effective decisions that produce the best possible result.⁶

A5.1. Rational Decision Making

Students demonstrate the ability to employ a rational process that avoids rationalizations and elevates logic over emotions. The rational process includes:

1) Identifying long-term and short-term objectives.
2) Devising alternative courses of action to achieve the objectives.
3) Foreseeing potential consequences to each person or group (i.e., the stakeholder) affected by the decision.
4) Choosing the course of action most likely to produce the optimum (i.e., best possible) result.
5) Monitoring the effectiveness of the decision and making adjustments as necessary to achieve the objectives.

A5.2. Ethical Decision Making

Students demonstrate the ability to discern the ethical implications of their choices by systematically considering core ethical principles and the discipline to do what they think is right even when it is difficult, risky, or personally costly.⁷

1) Students understand that they are morally and legally accountable for the consequences of their decisions (including a decision not to decide).
2) Students evaluate their choices in terms of core ethical principles (e.g., honesty, loyalty, respect, responsibility, fairness, caring, kindness, and good citizenship) and they eliminate any option that is illegal or unethical.
3) Students understand that in dilemmas where ethical principles compete (e.g., honesty versus kindness, loyalty versus fairness), they should choose the option most likely to produce the greatest good for the greatest number (i.e., the best possible result).

⁶ Many experts in the field of social and emotional learning list responsible decision making as a core skill of that domain. We have unpacked the concept of responsible decision making and included the intellectual and analytical aspects of this skill within the academic domain and the ethical aspects within the character domain.

⁷ The values and traits associated with ethical choices are fully discussed in the standards under C1.
### SOCIAL/EMOTIONAL DOMAIN

This domain is concerned with non-cognitive skills and traits, including: self-awareness and self-management (e.g., the ability to identify and regulate emotions), interpersonal social skills (e.g., the ability to empathize and communicate clearly and to form and sustain positive personal relationships), and positive life skills and traits (e.g., executive functioning, goal-setting, planning, time management, perseverance, resilience, and conscientiousness).

#### SE1. SELF-AWARENESS

**Students demonstrate self-awareness and the skills of introspection and reflection by identifying and understanding their emotions, values, attitudes, motivations, mindsets, and personal attributes.**

##### SE1.1. Emotions and Their Impact

Students demonstrate the ability to identify, label, verbalize, and understand the emotions they experience, the sorts of situations that cause them, and how their emotions influence their actions.

1. Students monitor their emotions and how they influence the way they perceive and respond to situations.
2. Students recognize and guard against a tendency to exaggerate in their own minds the severity and duration of the consequences of mistakes, embarrassing moments, failures, rejections, and other negative events.
3. Students know to seek help from trusted adults or mental health professionals if they experience severe and prolonged depression or the inclination to harm themselves or others.

##### SE1.2. Traits and Attributes

Students demonstrate the ability to accurately identify their dominant personality traits and their physical, mental, emotional, and moral attributes so that they can build on their strengths and improve their deficiencies.

##### SE1.3. Values, Beliefs, Attitudes, and Mindsets

Students demonstrate the ability to identify and understand their core values (i.e., what is really important to them), beliefs, opinions, attitudes, and mindsets and how they influence their feelings and actions. (For example, if the approval of others is a core value, they may be more vulnerable to peer pressure; or if they have a negative mindset, they may refuse to undertake new challenges.)

#### A5.3. Effective Decision Making

Students demonstrate the ability to make effective decisions that efficiently (using the least amount of time and resources) accomplish the desired result without causing unintended and undesirable consequences.

#### A5.4. Best Possible Result

Students understand that most problems can be solved and most situations can be addressed in a variety of ways that are effective and ethical. They take responsibility for evaluating these options and choosing the one most likely to produce the best possible result, an outcome that honors ethical principles, preserves trust, and produces the most good and minimizes harm.
SE1.4. Self-Acceptance

Though students are committed to continuous self-improvement, they are sufficiently comfortable "being themselves" to resist peer or other external pressure to change into someone they are not and don’t want to be.

SE1.5. Positive Concept of Happiness and Success

Students adopt a positive concept of personal happiness and success that goes beyond wealth, status, and fun. Students believe they will experience happiness and feel successful when they:
1) Experience and express gratitude for all the things in their lives that give them comfort, pleasure, pride, or joy.
2) Derive pleasure and pride from their achievements.
3) Pursue their full potential (self-actualization) by acquiring knowledge and wisdom, creating fulfilling personal relationships, and engaging in activities that broaden their horizons and enrich their minds.
4) Find value and gratification in selfless service that makes a positive difference in the lives of others.

SE1.6. Capacity to Be a Change Agent

Students demonstrate the ability to accurately assess current conditions (i.e., the way things are) and have the ability to envision how things could be better (i.e., the way things ought to be). They recognize their capacity to be a positive change agent in their families, school, community, and the world.

SE2. SELF-MANAGEMENT

Students understand that they have the power and responsibility to regulate their emotions, attitudes, and actions. They strive to exercise self-discipline so they can take full advantage of their strengths and virtues and effectively resist negative emotions and impulses.

SE2.1. Expressing Emotions

Students demonstrate the ability to verbalize positive and negative emotions at appropriate times and in appropriate ways that strengthen their relationships and advance their goals.

SE2.2. Self-Discipline

Students demonstrate the trait of self-discipline (i.e., will power) by:
1) Doing what they should do even when they might be able to get away with misbehavior (e.g., behaving and doing their work even when they have a substitute teacher or their teacher is out of the room).
2) Doing what they need to do (e.g., chores, homework, confronting a problem) without procrastination or excuses.
3) Resisting temptations and urges for immediate gratification.8

---

8 The ability to delay gratification has been linked to several positive outcomes including academic success, physical health, psychological health, and social competence.
SE2.3. Managing Stress, Anxiety, Depression, and Other Negative Emotions

Students demonstrate a basic understanding of and an ability to apply proven strategies to help them either manage or eradicate debilitating negative emotions (including stress, anxiety, depression, frustration, and persistent negative thinking) that can cause suffering, impair judgment, jeopardize relationships, or lead them to engage in self-defeating, unhealthy, unethical, or illegal conduct.9

SE2.4. Resilience and Courage

Students demonstrate the traits of resilience and courage by maintaining a positive outlook, overcoming fear, and drawing on their inner strength to muster the will to bounce back from the pain and grief of personal traumas and tragedies, disappointments, failures, and misfortunes. They are able to put their negative experiences behind them and move forward with confidence and optimism.10

SE2.5. Flexibility

Students recognize the potential of unexpected and undesirable changes that can cause distress and hinder their ability to perform (e.g., a new teacher in the middle of a semester, a death or divorce in the family). They demonstrate the trait of flexibility by adapting to changes and adjusting their attitudes, approaches, or actions in order to cope with and get the best possible result from the new situation.

SE2.6. Patience and Poise

Students demonstrate the traits of patience and poise by enduring delay, discomfort, inconvenience, difficulty, annoyance, and provocation with composure and without complaint. They wait their turn quietly and control any impulse to act out in frustration.

SE2.7. Self-Improvement

Students are committed to continual self-improvement. They seek and demonstrate the ability to constructively receive positive and negative feedback and to alter their attitudes and behavior in response to valid criticism. Students seek to improve their social and emotional skills and their chances of being happy and successful by identifying and eliminating bad habits, strengthening weak attributes, and developing positive traits such as self-discipline, conscientiousness, perseverance, resilience, and optimism.

SE2.8. Setting Goals

Students demonstrate self-management by formulating and prioritizing short-term and long-term goals related to school, career, and personal life. They identify intermediate objectives to help them reach their goals.

SE2.9. Planning

Students demonstrate the ability to formulate and follow specific plans to meet their goals.

SE2.10. Managing Time

Students know basic principles of organizational and time-management strategies and use these strategies to manage their responsibilities effectively and efficiently.

SE2.11. Organization

Students demonstrate the ability to organize their work and possessions (e.g., notebooks, school papers, lockers) in an orderly and efficient manner to enhance their productivity, efficiency, and success.

9 These Standards ask educators to provide students with tools and strategies to help them cope with common emotional traumas, including stress, anxiety, depression, grief, resentment, alienation, and feelings of inferiority. If these coping skills cannot be effectively taught in the school context, educators should provide students with guidance on where they can get help. Proven effective strategies to help students relax and reduce the negative impact of negativity, stress, anxiety, and depression include: 1) Mindful meditation, 2) Distraction — encouraging students to engage in activities that focus the mind on something else, 3) Physical exercise, 4) Listening to upbeat music, 5) Helping others, 6) Seeking the support of friends and family, and 7) Reframing — replacing negative thoughts with positive ones by: (a) identifying the negative belief or assumption behind the negative emotion, (b) challenging and disputing the belief or assumption, and (c) replacing the negative thought with a positive one by looking for a positive aspect of even a negative outcome (e.g., “I can do it but even if I fail I will learn something and I won’t have to worry about this anymore.”

10 Research documents that the trait of resilience (sometimes called grit) often determines who succeeds and who fails in school, the workplace, the athletic field, even the cancer ward. Resiliency can be strengthened through conscious effort. Ultimately, resilience is the product of a positive mindset — a way of looking at one’s experiences that permits one to not only cope with adversity, but to build success on the foundation of that adversity.
### SE3. Social Awareness

Students demonstrate social awareness by:

1. Demonstrating the ability to identify what another person is feeling (e.g., happy, sad, disappointed, confused, angry), what another person intends or wants (e.g., whether an offensive comment was accidental or malicious, when a person is seeking approval), and 3) they are able to “read between the lines” and extract unstated messages conveyed by the choice of words, the tone of voice, facial expressions, body language, silence, and other nonverbal cues (e.g., knowing someone is upset even when they insist they are fine).

2. Demonstrating an understanding of how the unique backgrounds, experiences, values, ideologies, and characteristics of individuals influence the way these individuals interpret and react to events and communications.

3. Accurately assessing how they are perceived by others (e.g., they can tell whether they are valued, trusted, respected, or liked).

4. Perceiving how others react to their statements and nonverbal communications.

5. Recognizing when a friend requires adult help to cope with severe emotional distress.

### SE3.2. Empathy

Students display the trait of empathy (the disposition and ability to sympathetically understand and personally identify with the emotional states, needs, and feelings of others) by consoling, comforting, calming, supporting, and encouraging others.

### SE3.3. Remorse

Students understand the importance to relationships of feeling and expressing sincere remorse to those they have wronged. They accept responsibility and apologize for injuries and offenses caused by their actions and they seek to make amends.

### SE3.4. Positive Relationships

Students seek to establish and maintain healthy, positive, mutually gratifying personal relationships with their teachers, classmates and others as a source of support, comfort, companionship, and intellectual stimulation.

1. Students demonstrate a willingness to alter their attitudes and conduct when necessary to reduce or prevent disharmony, generate respect and trust, and increase intimacy (provided such changes do not require them to compromise their values or integrity).

2. Students understand that meaningful and lasting friendships often require unselfishness, patience, understanding, acceptance, and loyalty.

### SE3.5. Effective Communication

Students demonstrate the ability to:

1. Send, receive, and correctly interpret information, ideas, thoughts, desires, and needs by both verbal and nonverbal communication.

2. Be assertive without being offensive or arrogant.

### SE3.6. Leadership

Students demonstrate the ability to build trust, inspire confidence, motivate, and positively influence individuals and groups by the use of reasoned argument, persuasion, inspiration, negotiation, and by setting an example. They are able to encourage and empower others with constructive criticism and timely praise. They know how to organize groups and build teams, mediate conflicts, build consensus, and understand and articulate the thoughts of a group.
### SE4. SUCCESS SKILLS AND ATTITUDES

Students demonstrate and continually seek to enhance the values, skills, and traits that increase personal happiness and the successful achievement of their academic, personal, and career goals.

#### SE4.1. Executive Function

Students demonstrate executive function, the ability to employ a multitude of crucial academic, social and emotional skills in performing tasks, sometimes in new and chaotic settings.\(^1\)

#### SE4.2. Commitment to Excellence

Students derive pleasure and pride from a job well done and pursue excellence in all they do. They understand the importance of effort, diligence, and hard work and they always strive to do their best and achieve the best possible result.

#### SE4.3. Conscientiousness

Students demonstrate the trait of conscientiousness by persisting with diligent efforts to complete tasks well, whether or not there is an external reward, and regardless of how difficult or boring the task is. They can be counted on to reliably following through on their commitments and plans.\(^2\)

#### SE4.4. Perseverance

Students demonstrate the trait of perseverance by continuing to perform their responsibilities and pursue their goals with vigor and tenacity despite frustrations, mistakes, setbacks, and other obstacles that make their task difficult or seem impossible. They resist temptations and pressures to give up or quit, choosing instead to persist as long as they are able.

#### SE4.5. Self-Confidence

Students demonstrate confidence in their abilities and inner strength to succeed and endure difficulties, failures, and other forms of adversity. In social situations they are assertive and willing to state their opinions despite the risk of disapproval, criticism, or rejection.

#### SE4.6. Self-Motivation and Action

Students demonstrate the ability to motivate themselves to begin a task and to independently generate ideas, responses, and problem-solving strategies.

1. Students understand that there can be no success without action and that they must be bold, proactive, and decisive in the pursuit of their plans, goals, dreams, and responsibilities.

2. Students do not procrastinate.

---

\(^1\) There are multiple skills that define executive functioning. These Standards include them all in one form or another: remembering and applying learned information (i.e., working memory), self-awareness, self-monitoring and self-control (sometimes referred to as inhibition), concentration, goal-setting, planning and prioritizing, organizing, time-management, and flexibility. The concept underlying executive function is that students must employ these skills, sometimes simultaneously, in a seemingly infinite variety of real-life settings filled with distractions and demands that require concentration and flexibility. If we think of each skill as a musical instrument we must think of real world functioning as a performance by an orchestra. Each student must develop the ability to be the conductor of that orchestra, using all the instruments in a way that produces good music.

\(^2\) Conscientiousness embraces several important attributes including self-discipline and the pursuit of excellence. Along with positivity and resilience, conscientiousness has proved to be a trait that yields lifelong benefits. Children who score high on tests measuring conscientiousness get better grades in high school and college; commit fewer crimes; stay married longer and live longer (they smoke and drink less and have fewer strokes, lower blood pressure, and a lower incidence of Alzheimer’s disease). Conscientiousness is a better predictor of life success than I.Q.
SE4.7. Positivity

Students demonstrate the trait of positivity by choosing to be optimistic, enthusiastic, hopeful, and cheerful. Students sustain their positive outlook based on the following beliefs:

1) Positive attitudes produce positive results — positive people are more likely to achieve their goals, feel successful, have good relationships, have better health, and live longer than those with negative outlooks.

2) Happiness is a state of mind, not a circumstance or fact (i.e., if they think they are happy, they are) and that, as Shakespeare’s Hamlet says, “there is nothing either good or bad, but thinking makes it so.”

3) There are positive aspects (i.e., the silver lining) in all experiences. One can characterize any experience in terms of its positive aspects (e.g., after a fire destroying most of his possessions, a positive person can feel genuinely fortunate and grateful that no one was hurt).

SE4.8. Gratitude

Students demonstrate the trait of gratitude by consistently appreciating and expressing thanks for the good things in their lives (i.e., they count their blessings). They invariably and graciously express gratitude for gifts, favors, compliments, and services received. (While positive people see the glass as half full, grateful people are thankful for the half they have rather than resentful about the half they don’t.)

SE4.9. Forgiveness

Students recognize that resentments, regrets, and grudges diminish their ability to enjoy their lives and can prevent them from moving forward. They demonstrate the ability to forgive others and to let go of negative feelings so they can get on with their lives.

SE4.10. Technological Literacy

Students demonstrate competence in the ability to choose, learn, and safely and ethically use various current and emerging technologies to communicate socially and professionally, conduct research, acquire diverse perspectives, and gain new knowledge and skills that will enhance their analytical and critical thinking skills.

SE4.11. Financial Literacy

By the time they graduate high school, students demonstrate a basic understanding of personal financial management. They understand the value of being prudent, skeptical, and well-informed when making financial decisions, especially if they involve borrowing money or living beyond their means.

---

13 The range of relevant financial information students should know is extensive: how tax deductions affect earnings; what is required concerning the payment of taxes; how to interpret sales offers (e.g., “buy 2 get 1 free”); and compute the actual cost of products and services; how to use checks and balance a checkbook; how to use credit cards and calculate interest charges; how loans and interest work; and the nature and cost of insurance. Students also should have some knowledge of bankruptcy and the financial risks and consequences of gambling.
This domain is concerned with educational outcomes that help students develop the constellation of moral and ethical qualities that define good character. Successful efforts to build good character will result in a safe, caring, and respectful school climate that provides students with standards of right and wrong and instills in them ethical consciousness, commitment and competencies that will help them achieve personal, school, and career goals; live happy, worthy and fulfilling lives; and become engaged, responsible, and productive citizens.  

### C1. COMMITMENT TO CHARACTER AND ETHICS

Students understand the personal and social importance and the basic terminology and concepts of character and ethics. They strive to acquire the knowledge, adopt the values, and develop the skills, traits, and conduct patterns of a person of good character, and they seek to govern their choices and actions by universal moral/ethical principles.

#### C1.1. Components of Good Character

Students understand that good character consists of attributes reflecting positive moral values, traits, dispositions, habits and attitudes. They know that their character (i.e., who they are inside) will define them, shape their reputation, and determine how they are likely to act. (For example, will they be generous or indifferent to a person in need, kind or cruel to a person who made a mistake, honest or devious in dealing with others?)

#### C1.2. Importance of Character

Students understand that good character is more important to success, meaningful relationships, self-respect, and the esteem of others than other commonly valued attributes, including intelligence, beauty, talent, money, and status. Character not only defines who they are, it determines their future.

#### C1.3. Responsibility for Character

Students understand that their character is a product of their values and choices (i.e., the formation of their character lies in their own hands). Students accept and demonstrate personal responsibility to create and improve their character by conscientious efforts to strengthen their commitment and adherence to ethical values and principles.

#### C1.4. The Six Pillars of Character

Students understand that ethical beliefs and actions are the foundation of good character (i.e., character is ethics in action). They seek to develop and display the virtues and traits arising from universal ethical values known as the Six Pillars of Character: trustworthiness, respect, responsibility, fairness, caring, and good citizenship.

#### C1.5. Knowledge of Ethical Concepts and Terms

Students understand that the concepts of character and ethics refer to principles that establish standards of right and wrong; these standards define morality and prescribe how a good person should behave. They understand that:

1) There is a difference between universal ethical values (beliefs about virtue and morality consistent across time and cultures) and personal ethical values (personal beliefs about right and wrong, often based on political or religious convictions that are not universal because people of character disagree on whether they establish ethical duties for everyone.  

2) Ethical duties and moral obligations are different from, and sometimes more demanding and important than, legal duties. For example, civil disobedience (the deliberate and open violation of unjust laws) is an expression of an ethical duty.

3) "Ethics" and "values" are not interchangeable terms. Ethics concerns what is right and wrong, whereas values are simply what matters to us (e.g., health and wealth). A person of good character has deeply held ethical values.
## C2.TRUSTWORTHINESS

Students develop and demonstrate the character trait of trustworthiness. They understand that trust is an essential ingredient in meaningful and lasting relationships, as well as school and career success, and they strive to earn the trust of others by demonstrating the ethical virtues of integrity, honesty, promise-keeping, and loyalty.

### C2.1. Integrity

Students demonstrate integrity by adhering to ethical principles, acting honorably and assuring that there is consistency between their beliefs, words, and actions. They safeguard their integrity and demonstrate their character by exercising the moral courage to do the right thing even when it is difficult or detrimental to their relationships, social standing, careers, or economic well-being (i.e., they do the right thing even when it costs more than they want to pay).

### C2.2. Honest Communications

Students recognize the central role honesty plays in generating trust, and they demonstrate honesty in their communications in three ways:

1) Truthfulness. Students are truthful; everything they say is true to the best of their knowledge (i.e., they do not lie).

2) Sincerity. Students are sincere. This means they always convey the truth as best they can, avoiding all forms of accidental or intentional deception, distortion, or trickery (e.g., it is dishonest to tell only part of the truth or to omit important facts in an effort to create a false impression).

3) Candor. Students know that certain relationships (e.g., parent-child, teacher-student, best friends) create a very high expectation of trust. In these relationships, honesty requires them to be candid and forthright by volunteering information to assure that they are conveying the whole truth, and nothing but the truth (e.g., a student who accidentally spills soda on a school computer must voluntarily tell the teacher without being asked; a student who breaks her mother’s favorite vase must tell her mother voluntarily).

### C2.3. Honest Actions

Students demonstrate honesty by honoring the property rights of others (they do not steal) and playing by the rules in sports and other activities (they do not cheat).

### C2.4. Belief That Honesty Pays

Students believe that honesty and integrity will help them succeed in school and life and strengthen their relationships; they reject common rationalizations for lying and cheating as false and short-sighted (e.g., one has to lie or cheat in order to succeed, everyone cheats, it’s only cheating if you get caught).

### C2.5. Promise-Keeping, Reliability, Dependability

Students demonstrate trustworthiness by being reliable and dependable, being cautious about making promises and commitments, and conscientious about keeping the promises and commitments they make.

### C2.6. Loyalty

Students demonstrate trustworthiness by being loyal and standing up for their friends, family, school, and country. Proper demonstrations of loyalty include not disclosing embarrassing information or secrets confided in them (unless keeping the secret could result in serious harm) and refraining from gossip that could hurt feelings or damage reputations or relationships. Loyalty is not an excuse to justify lying or other unethical conduct.
## C3. RESPECT

Students believe that the well-being and dignity of all people is important. They treat all individuals with respect, judging them on their character and ability without regard to race, religion, sexual orientation, political ideology, gender, age, or other physical or personal characteristics.

### C3.1. Treating Others With Respect

Students understand that they are not morally required to respect everyone in the sense of holding them in high esteem, but they are required to treat everyone with respect regardless of their personal assessment of the person’s character or worth (e.g., we treat criminals with respect, not because they deserve it, but because of who we are).

<table>
<thead>
<tr>
<th>C3.2 The Golden Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students understand the universal Golden Rule (&quot;do unto others as you would have them do unto you&quot;) and apply it as a standard of respect.16</td>
</tr>
</tbody>
</table>

### C3.3. The Basics of Respect

Students demonstrate respect by:

1. Being civil, courteous, and polite (i.e., they use good manners).
2. Refraining from offensive and disrespectful profanity, insults and gestures.
3. Listening respectfully to others even if they think what’s being said is wrong or foolish.
4. Paying attention to the well-being of others and striving to make them feel comfortable and welcome.
5. Learning about and treating with respect the customs and traditions of people who come from different cultures.

### C3.4. School Climate of Respect and Kindness

Students demonstrate respect by seeking to create and support a kind, caring, respectful, and emotionally and physically safe school climate. They refrain from and discourage others from engaging in violence, threats, intimidation, and other conduct intended or likely to cause physical injury, emotional pain, humiliation, embarrassment, shame, or a feeling of being left out or excluded. This includes:

1. Unwelcome physical touching (i.e., they keep their hands to themselves).
2. Cruel, unkind, or deliberately hurtful or embarrassing gossip.
3. Physical intimidation, cyberbullying, harassment, and mean-spirited teasing or taunting.

### C3.5. Respecting Privacy

Students demonstrate respect by acknowledging and honoring each other’s right to privacy and personal space, including the right to determine whether, how and when information about their personal lives and thoughts will be revealed (e.g., it is disrespectful to read another’s diary, look through another’s backpack, hack their Facebook page, or eavesdrop on their conversations).

16 The Golden Rule (referred to as the rule of reciprocity in philosophical literature), though often associated with Christianity, has deep roots in every major religion and culture starting with Confucius in 557 B.C.:

> "What you do not want done to yourself, do not do to others." The common positive formulation of the concept — "Do unto others as you would have them do unto you" — is accepted worldwide and should not be regarded simply as a religious precept.
### C3.6. Respecting Others’ Autonomy

Students demonstrate respect by acknowledging and honoring the desire and right of others to govern themselves (i.e., autonomy), make decisions about their lives and be free from oppressive and offensive behavior and unwanted interference in their lives. This includes:

1) Taking the desires, opinions, perspectives, values, and goals of others seriously.
2) Refraining from repetitive arguments, tirades, rants, insults, ridicule, manipulation, or coercion to cause others to change their opinions or actions.
3) Providing others with the information they need to make informed judgments about their own lives rather than concealing the information to advance their own goals or to shield them from potential bad choices. (Example: Suppose an old boyfriend of your best friend gives you a note to give to your friend but you think it would be a terrible idea if your friend started communicating with him again – the principle of autonomy says you should deliver the note.)

### C4. Responsibility

Students demonstrate the trait of responsibility by taking ownership of their lives and acknowledging their power to choose what they think (including their attitudes and mindsets), say, and do. They are accountable for the consequences of their choices.

Students accept responsibility to do what they are required to do by their parents, teachers, coaches, and other adults who have legitimate authority. Students also are careful to keep their own promises and commitments.

#### C4.2. Ethics: Doing What Should Be Done

Students accept responsibility to do what they should do based on their personal values and universal ethical principles such as the Six Pillars of Character (trustworthiness, respect, responsibility, caring, fairness, and citizenship).

#### C4.3. Consequences for Their Words

Students accept responsibility for the consequences of what they say, recognizing that their words can have serious and lasting impact on others (e.g., insults can harm another’s self-image and revealing secrets can destroy relationships). They seek to affirm, support, and encourage others rather than humiliate, discourage, or demean them.

#### C4.4. Consequences for Their Actions

Students accept responsibility for the consequences of their actions and inactions, recognizing obligations to:

1) Foresee and avoid harmful outcomes, including unintended but predictable consequences.
2) Help others in need (e.g., charity).
3) Protect others from harm or abuse (e.g., stand up for a student who is bullied).

#### C4.5. Developing and Using Positive Attitudes and Life Skills

Students acknowledge their responsibility to enhance their chances of success in school and life, in the quality of their relationships, and in their own well-being and happiness by:

1) Consciously choosing positive attitudes and mindsets (including optimism, enthusiasm, gratitude, and cheerfulness) and rejecting self-defeating attitudes (e.g., pessimism, cynicism, defeatism, and hopelessness). (See SE4.7.)
2) Developing critical self-management and social skills traits, including: self-discipline, resiliency, perseverance, stress management, organization and time management, planning and goal-setting, initiative, flexibility, poise, patience, communication, collaboration, and an uncompromising commitment to excellence. (See SE2, SE3, SE4.)
C4.8. Being Rational and Reflective

Students demonstrate responsibility by being rational (using reason and logic to make or justify decisions) and reflective (thinking ahead to anticipate the consequences of choices, and thinking back to draw lessons from what happened). They use critical thinking and decision making skills to avoid rationalizations and excuses and to make rational, prudent choices.

C4.9. Healthy Choices

Students demonstrate responsibility by making healthy choices to protect their well-being by eating well, getting sufficient sleep and exercise, and by refraining from the use of illegal drugs and other intoxicating or mind-altering substances. They do not abuse prescription drugs, use alcohol or tobacco, or engage in self-abusive practices (e.g., cutting, overeating, anorexia, bulimia).

C5.1. The Basics of Fairness

Students:
1) Take turns.
2) Play by the rules.
3) Give due credit to others.
4) Ask for and take only their fair share.

They don’t:
1) Claim credit for the work of others.
2) Recklessly or falsely blame or accuse others.
3) Take advantage of another’s mistakes or ignorance.

C5.2. Making Fair Decisions

In making decisions that affect others, students demonstrate the trait of fairness by:

1) Being open-minded and objective.
2) Giving everyone affected by a decision the chance to tell their side of the story.
3) Considering the merits of all evidence relevant to a just resolution.
4) Being impartial.
5) Consciously setting aside personal feelings (bias or favoritism) that might interfere with objectivity.
There are five major alternative theories of fairness: 1) Equality – everyone should get equal shares regardless of other factors; 2) Work – only those who worked should receive benefits; 3) Effort – shares should be allocated in proportion to effort (those who try hardest should get the most); 4) Seniority – benefits should be distributed in order of age or seniority (the oldest or the person who has been around longest gets priority treatment); 5) Productivity – benefits should be distributed in proportion to the productivity of the person (the best performers get the most).
## C7. Good Citizenship

**C7.1. Civil Rights**
Students understand and appreciate the rights and liberties embodied in the Constitution and Bill of Rights, including:
1) Freedom of speech and religion.
2) The right to vote and run for elected office.
3) The right to be treated fairly under the law.

**C7.2. Civil Responsibilities**
Students understand and strive to fulfill the responsibilities of citizenship, including: a duty to abide by the law, respect the rights of others, participate in the democratic process, protect the environment, and volunteer to improve their school and community. They also understand additional responsibilities of adult citizenship, including paying taxes and serving on juries.

**C7.3 Respect for Authority and the Law**
Students demonstrate good citizenship by contributing to the orderliness and fairness of society by respecting authority, obeying rules and laws (unless a higher moral duty justifies civil disobedience) and taking action (including reporting) to protect fellow citizens from dangerous or harmful conduct.

1) Students understand the special role that civil disobedience plays in the democratic process and the extraordinary conditions that must exist to justify unlawful conduct.

2) Students set an example for their peers, abiding by laws and following rules even when it is inconvenient (e.g., returning their shopping carts, respecting the 10-items-or-less rule in markets).

**C7.4. Participation in the Democratic Process**
Students demonstrate good citizenship by staying informed about matters important in their school and community so they can formulate thoughtful positions, passionately advocate for their beliefs, engage in respectful and informed discussions, vote intelligently, and, if they choose, seek elected or appointed leadership positions.

1) Students exercise their civil rights fairly and responsibly. They examine and evaluate political claims and allegations to determine for themselves what is true, and they maintain an open mind so they can assess the merits of others’ political positions.

2) Students maintain an open mind (i.e., a willingness to be persuaded) and demonstrate a willingness to re-examine their own positions and objectively consider the arguments and beliefs of others.

**C7.5. Improving School Climate**
Students demonstrate good citizenship by promoting and modeling responsible, respectful, caring, honest, and fair conduct to create and maintain a safe and positive school climate where all students feel physically and emotionally safe, cared for, and respected.

1) Students personally refrain from, and discourage others from, all forms of bullying and other forms of mean and unkind conduct.

2) Students do their share to make their school a clean, attractive, and comfortable place to learn and grow.

**C7.6. Environmental Protection**
Students demonstrate good citizenship by proactively engaging in conduct that conserves natural resources (e.g., reducing, reusing, and recycling, and using water and fuel conservatively). They also protect the natural environment from unnecessary destruction and all forms of pollution.
